# KNOW YOUR TYPE HEADPHONE

1

**Over-the-ear headphones** are more comfortable to wear for extended periods of time, because the pads surround the outer ear.

2

**On-ears headphones** are optimized for on-the-go users, so their design is focused on smaller size.

3

**In-ear headphones** are designed just to cut the distance between your ear and the sound in half. With in-ear buds you also benefit from outside sound canceling.

4

**Wireless headphones** are of course wireless- without any cables. This gives you more freedom in your movement, so great for when you are exercising.

## PINNA CM5091

DESIGN PATENT

Inspired by our love for music we are proud to present the PINNA head phone. Not only will the PINNA offer you an incredible sound experience but you will look smashing thanks to its luxurious glossy surfaces. The PINNA is lightweight and foldable, so easy to carry with you. Available in 6 trendy colors, so make a fashion statement!

	80 x 20 mm			200
	40 x 20 mm			128 x 76 mm

# 8 FACTS ABOUT SPEAKERS

1

A speaker uses a cone that is attached to an electromagnet, which responds to an electrical signal, causing the cone to vibrate and produce sound.

5

The scientific study of sound waves is known as acoustics.

2

Sound thus comes from vibrations. These vibrations create sound waves which move through mediums such as air and water before reaching our ears.

6

Speakers can be either wired using audio cables, or wireless with the speaker transmitting sound via radio signals.

3

Our ears vibrate in a similar way to the original source of the vibration, allowing us to hear many different sounds.

7

Frequencies above 20,000 Hz are too high to be heard by humans.

4

The speed of sound is around 767 miles per hour (1,230 kilometres per hour).

8

The position of a speaker in a room, as well as the position of the person, the size of the room, and how sound absorbing the room is, all affect the sound quality coming from the speaker.
